### UNDERWATER BRIDGE INSPECTION REPORT

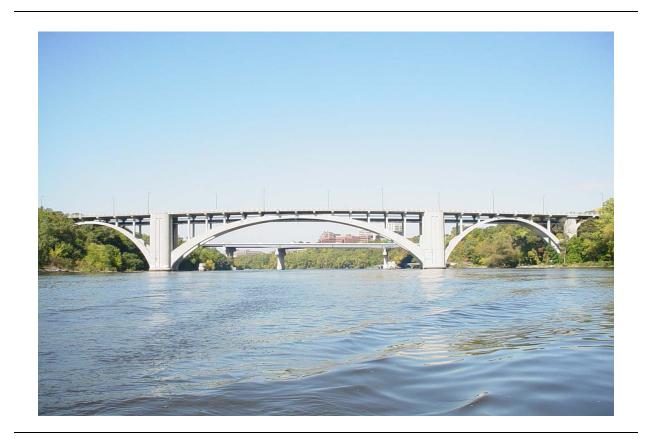

### STRUCTURE NO. 2441

### FRANKLIN AVENUE (CSAH NO. 5)

### OVER THE

### MISSISSIPPI RIVER

### **DISTRICT 5 - HENNEPIN COUNTY**

### PREPARED FOR THE

### MINNESOTA DEPARTMENT OF TRANSPORTATION

BY

COLLINS ENGINEERS, INC.

JOB NO. 3512 (CEI 121)

### MINNESOTA DEPARTMENT OF TRANSPORTATION UNDERWATER BRIDGE INSPECTION

### **REPORT SUMMARY:**

The substructure units inspected at Bridge No. 2441, Piers 2 and 3, were found to be in satisfactory to fair condition. Both piers exhibited substantial section loss with exposed reinforcing steel; however, due to the massive size of the piers, the deterioration has not yet significantly compromised the structural capacity of the piers. The channel bottom around the substructure units appeared stable with no evidence of significant scour or appreciable changes since the previous inspection.

### INSPECTION FINDINGS:

- (A) The concrete of both pier shafts was typically deteriorated from 1 foot above the waterline to the channel bottom. The heaviest deterioration has occurred in the splash zone between the waterline and 3.5 feet below. The heavier deterioration has exposed reinforcing steel with typical penetrations into the concrete of 8 inches. Deterioration at the various corners of the shafts has penetrations of up to 1 foot.
- (B) Steel and timber debris was observed on the channel bottom around the entire perimeter of Pier 2.

### RECOMMENDATIONS:

- (A) The deterioration with exposed reinforcing steel should be addressed before it progresses and becomes more detrimental. At the minimum, the exposed reinforcing steel should be cleaned and covered with an epoxy grout. Due to the significant loss of concrete section, however, a more desirable repair would be to remove all loose and unsound concrete, clean the exposed reinforcing steel, and reform the shaft to the original dimensions and lines with a concrete mix designed for underwater applications.
- (B) Reinspect the submerged substructure units at the normal maximum recommended (NBIS) interval of five (5) years.

I hereby certify that this plan, specification, or report was prepared by me or under my direct supervision and that I am a duly Licensed Professional Engineer under the laws of the State of Minnesota.

Daniel G. Stromberg

Date 6/30/2004 Registration No. 21491

Respectfully submitted,

## MINNESOTA DEPARTMENT OF TRANSPORTATION UNDERWATER BRIDGE INSPECTION

### 1. <u>BRIDGE DATA</u>

Bridge Number: 2441

Feature Crossed: The Mississippi River

Feature Carried: Franklin Avenue (CSAH No. 5)

Location: District 5 - Hennepin County

Bridge Description: Bridge No. 2441 has a five span, open-spandrel concrete

arch superstructure. The superstructure is a supported by two reinforced concrete abutments and four reinforced concrete piers. The available design drawings did not indicate the type of footing or foundation construction of the piers. The piers are numbered 1 through 4 starting from

the south end of the bridge.

### 2. <u>INSPECTION DATA</u>

Professional Engineer/Team Leader: Shirley M. Walker, P.E.

Dive Team: Clayton G. Brookins, Michelle D. Koerbel

Date: October 1, 2002

Weather Conditions: Sunny,  $\pm 70^{\circ}$  F

Underwater Visibility:  $\pm 2$  Feet

Waterway Velocity: Negligible/None

### 3. <u>SUBSTRUCTURE INSPECTION DATA</u>

Substructure Inspected: Piers 2 and 3.

General Shape: The piers consist of large oblong rectangular shafts with rounded

noses. The drawings furnished did not provide any foundation

information.

Maximum Water Depth at Substructure Inspected: Approximately 9.5 Feet.

### 4. <u>WATERLINE DATUM</u>

Water Level Reference: Benchmark on Pier 2 at Elevation 731.0.

Water Surface: The waterline was approximately 5.2 feet below reference.

Waterline Elevation = 725.8.

### 5. NBIS CODING INFORMATION (Minnesota specific codes are used for 92B and 113)

Item 60: Substructure: Code 5

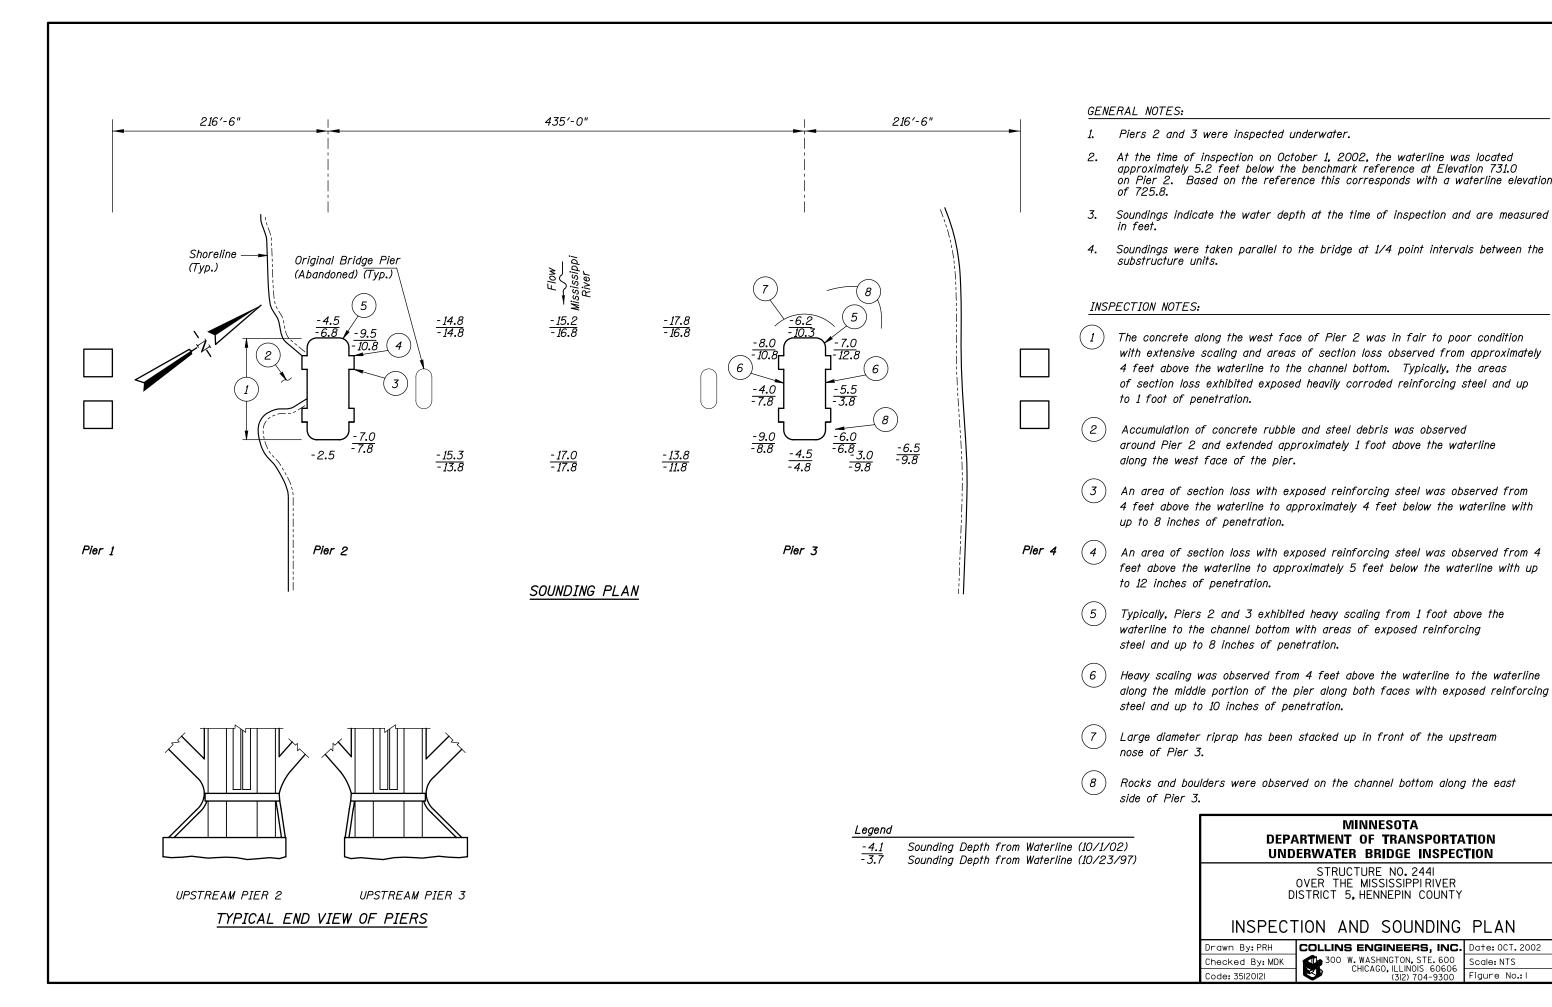

Item 61: Channel and Channel Protection: Code 7

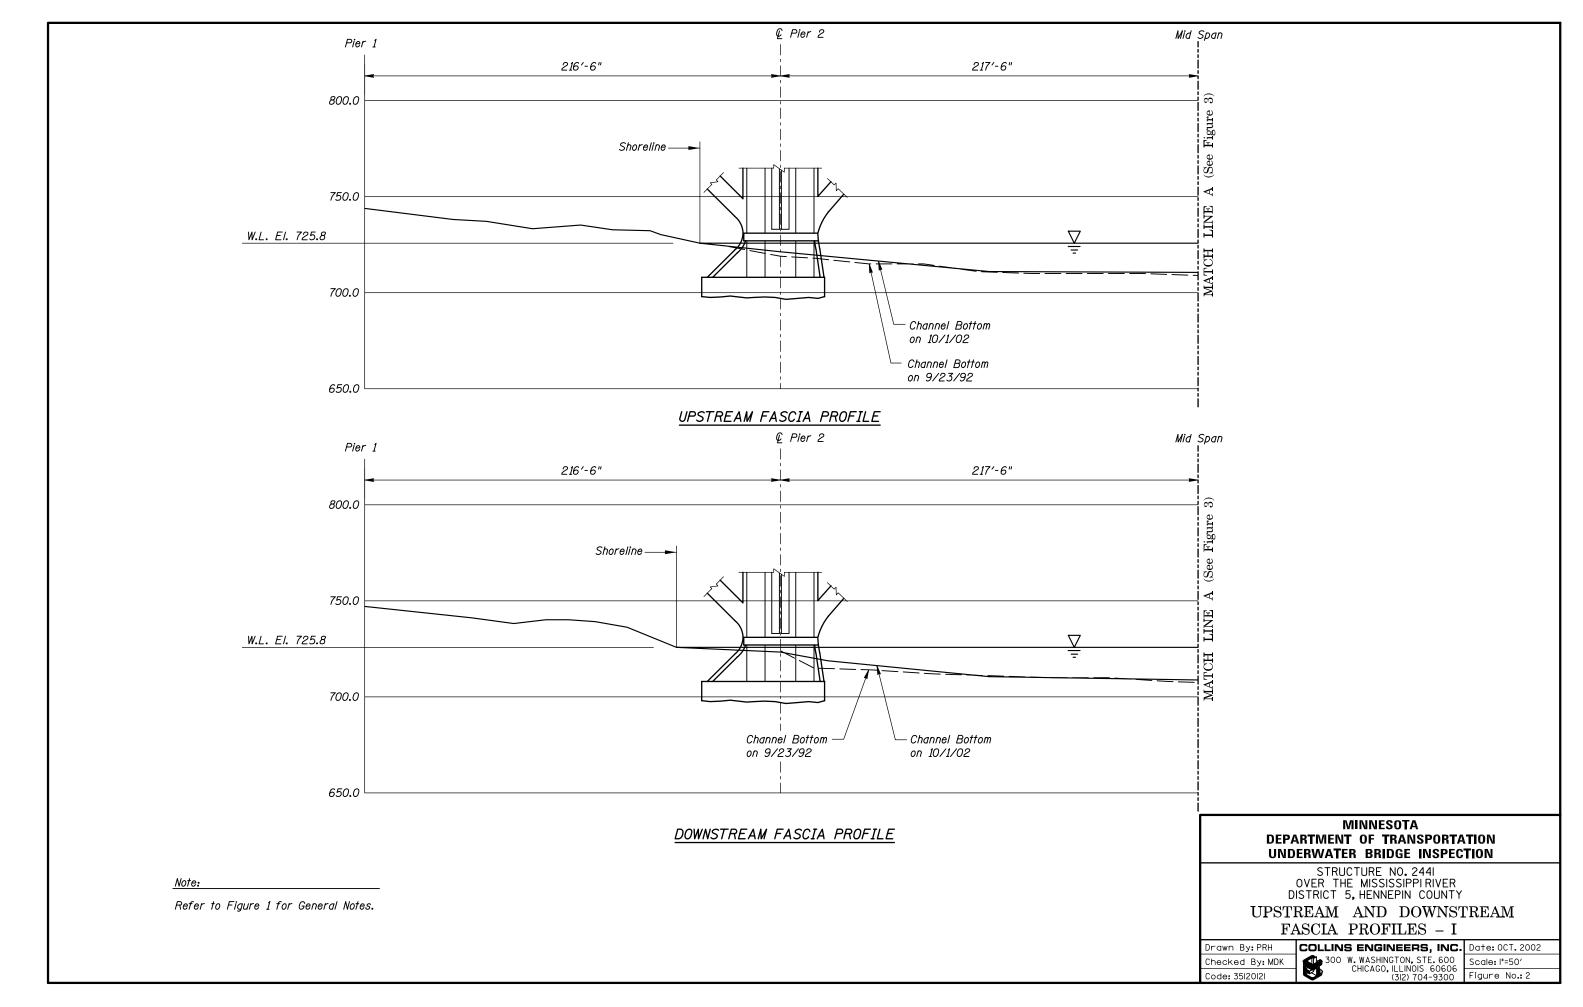

Item 92B: Underwater Inspection: Code B/10/02

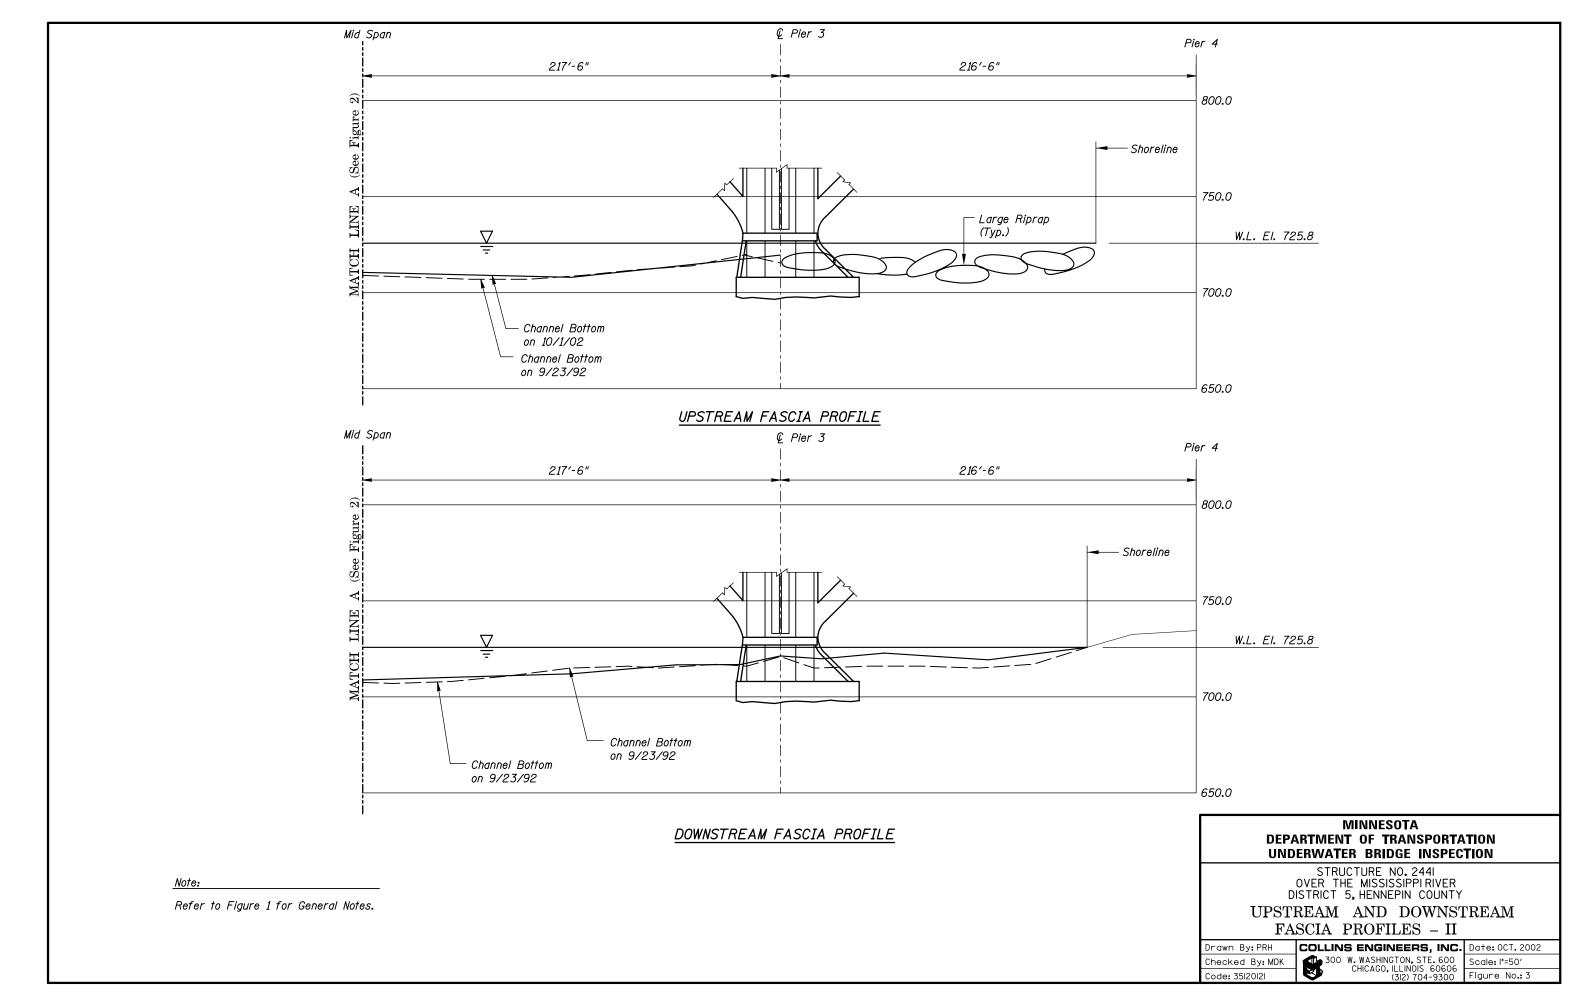

Item 113: Scour Critical Bridges: Code R/02

Bridge is scour critical because abutment or pier foundation is rated as unstable due to observed scour at bridge site.

# MINNESOTA DEPARTMENT OF TRANSPORTATION OFFICE OF BRIDGES AND STRUCTURES DAILY DIVING REPORT

INSPECTORS: Collins Engineers, Inc. DATE: October 1, 2002

ON-SITE TEAM LEADER: Shirley M. Walker, P.E.

BRIDGE NO: 2441 WEATHER: Sunny, " 70° F

WATERWAY CROSSED: The Mississippi River

DIVING OPERATION: X SCUBA SURFACE SUPPLIED AIR

**OTHER** 

PERSONNEL: Clayton G. Brookins, Michelle D. Koerbel

EQUIPMENT: Scuba, U/W Light, Scraper, Sounding Pole, Lead Line, Probe Rod, Camera

TIME IN WATER: 4:30 P.M.
TIME OUT OF WATER: 4:50 P.M.

WATERWAY DATA: VELOCITY Negligible/None

VISIBILITY " 2 Feet

DEPTH 9.5 feet maximum at Pier 2

ELEMENTS INSPECTED: Piers 2 and 3

REMARKS: Overall, the concrete of both pier shafts from 4 feet above the waterline to 4 feet below the waterline was in fair condition with heavy scaling, extensive section loss, and exposed reinforcing steel observed at both piers. An accumulation of concrete rubble and steel debris was observed around Pier 2. The channel bottom appeared stable with no signs of significant scour or appreciable changes since the previous inspection.

FURTHER ACTION NEEDED: X YES NO

At minimum, the exposed reinforcing steel should be cleaned and covered with an epoxy grout. Due to the substantial loss of section, however, a more desirable repair would be to remove all loose and unsound concrete, clean the exposed reinforcing steel, and reform the concrete to the original dimensions and lines.

Reinspect the submerged substructure units at the normal maximum recommended (NBIS) interval of five (5) years.
